

# Spray Wash

## Liquid Car Wash Detergent

### DESCRIPTION:

SPRAY WASH is a high strength, alkaline, foaming liquid detergent designed for touchless automatic car wash systems. It is applied at low pressure through the spray arch mechanism in a touchless car wash to penetrate the dirt and road film to be removed by the pressure rinse cycle of the wash. SPRAY WASH can also be used at much higher dilution rates for high pressure coin operated car washes.

### DIRECTIONS:

Apply SPRAY WASH at a rate of 3 – 4% at 40 - 50°C in soft water conditions. A 30 second contact time is recommended for best results. Pressure rinse at 1000 p.s.i. or more with clean hot water. Hot or cold wax should be applied prior to drying.

**For further information, please review the Safety Data Sheet (SDS) and Product Label.**

### STORAGE & HANDLING:

Keep from freezing. Store upright in original closed container at room temperature away from children. Do not mix with any other chemicals.
