

Weld Guard

Anti Spatter

DESCRIPTION:

Weld Guard has been formulated to keep splatter from adhering as well as protecting work pieces and welding equipment such as robotics, nozzles, contact tips, etc.

Weld Guard can be used in high temperature applications such as, but not limited to, titanium, steel and steel alloys, stainless steel and multiple pass welding, pre-heated work pieces and thin sheet welding , MIG and Arc welding. Can also be used for prepping sheet for laser or plasma cutting. Helps keep slats clean for less maintenance. **Weld Guard** can also be used to clean and degrease your surfaces prior to working on them.

FEATURES:

Easy to use - Protects your equipment - Very efficient and saves you time

DIRECTIONS:

Spray a thin atomized mist until all areas needing protection are wet. You may achieve the best results by pulling the bottle trigger firm and fast. keep the sprayed product approx. 15 - 20 cm (6 – 8 in) from weld seam. Avoid over wetting on the weld seam, this may cause porosity of the weld.

For further information, please review the **Safety Data Sheet (SDS)** and **Product Label**.

STORAGE & HANDLING:

Keep from freezing. Store upright in original closed container at room temperature away from children. Do not mix with any other chemicals.
